

Leave a little room for the air

When you gas up, don't top off the tank. It's safer and helps keep the air clean.

When you're at the pump filling up, chances are you already avoid topping off for reasons of your own—like the fact that spilling gas can be a smelly, not to mention hazardous, situation. Topping off releases harmful gas vapors into the air and cancels the benefits of anti-pollution devices on the pump. That means stopping short of a full tank is safer and it reduces pollution. So keep it up because—

It all adds up to cleaner air
